# What happens during a public health crisis?

## Public:

- What is this? Why is it happening?
- Lots of information become available at the same time. Is it all good?
- Who do I trust?
- How can I filter out non relevant or information?
- ...

## Policy makers:

- Choices need to be made. Sometimes hard choices.
- What do people think? How do they behave?
- Are they willing to accept this or that measure?
- Which specific subset of the population is facing the hardest time?
- How do we prioritize interventions?
- ...

There is no “one size fits all” approach

# PubliCo is supported by:

Collegium  
Helveticum

# Index

<b>Welcome</b>	<b>Welcome of the Collegium Helveticum, jointly supported by the University of Zurich, ETH Zurich and Zurich University of the Arts.</b>	<b>Christian Ritter (Collegium Helveticum)</b>
<b>Introduction</b>	From infodemics and their impact on societies (in different fields) to strategies for solutions	Beat Glogger (scitec-media)
<b>The need</b>	The infodemic in the context of the COVID-19 crisis, how it impacts people and societies; the need for better ways to inform people and to understand their needs	Tim Nguyen (WHO, health emergencies programme)
<b>The idea</b>	Core idea of PubliCo: quantitative and qualitative tools to listen to people and to provide personalized information	Nikola Biller-Andorno (IBME) / Sonja Merten (SwissTPH)
<b>The strategy</b>	The long way from “it would be nice to have” to “that’s how we’re gonna do it”	Giovanni Spitale (IBME)
<b>The structure</b>	Design process, how to translate ideas into things. Focus on privacy and lean code, easy to deploy even in low tech settings	Giulio Michelon (Belka)
<b>Citizen science</b>	What is citizen science, why it is important to involve citizens as active actors in science, how this was important in PubliCo’s development (ProjectBuilder)	Rosy Mondardini (Citizen Science Centre Zurich)
<b>WHO White paper</b>	Sharing techniques and experiences to inform others.	Kristen Jafflin (SwissTPH)
<b>Future</b>	PubliCo is more than a COVID-19 response tool. Its modularity allows to develop and store different preset modular surveys to be deployed when needed – eg earthquake, flood, biological risk and so on. Also, we will do our best to deploy and test it also in other context than Switzerland, including EU countries but also LMIC. We easily imagine 5-10 years of research in this sense.	Nikola Biller-Andorno (IBME) / Sonja Merten (SwissTPH)
<b>Demo</b>	Demonstration of how the tool works	Samuel Giacomelli (Belka)
<b>Open discussion</b>		

# 1. Introduction

Beat Glogger (scitec-media)

## 2. The need

Tim Nguyen (WHO, health emergencies programme)

# The infodemic in the context of the COVID-19 crisis, how it impacts people and societies; the need for better ways to inform people and to understand their needs

Tim Nguyen  
World Health Organization

## An infodemic is accompanying the pandemic

- An infodemic is an overabundance of information – good or bad – that makes it difficult for people to make decisions for their health
- Misinformation<sup>1</sup>, disinformation<sup>2</sup> and fake news can cause real harm to health, public trust, social cohesion and emergency response

<sup>1</sup> inaccurate information

<sup>2</sup> false or inaccurate information intended to mislead

**We're not just fighting an epidemic; we're fighting an infodemic. Fake news spreads faster and more easily than this virus, and is just as dangerous.**

**Tedros Adhanom Ghebreyesus**  
Director-General, World Health Organization

# The COVID-19 infodemic can harm health

- The infodemic can lead to confusion, risk-taking and harmful behaviours
- In some countries, misinformation has generated mistrust in governments, public health authorities and science

## Approximately:

- 700 people have died
- 5,011 have been hospitalized and
- 90 have developed blindness or eyesight damage after drinking methanol as a “cure” for coronavirus

Photo credits:

# Technology has changed the way information is produced, distributed and consumed

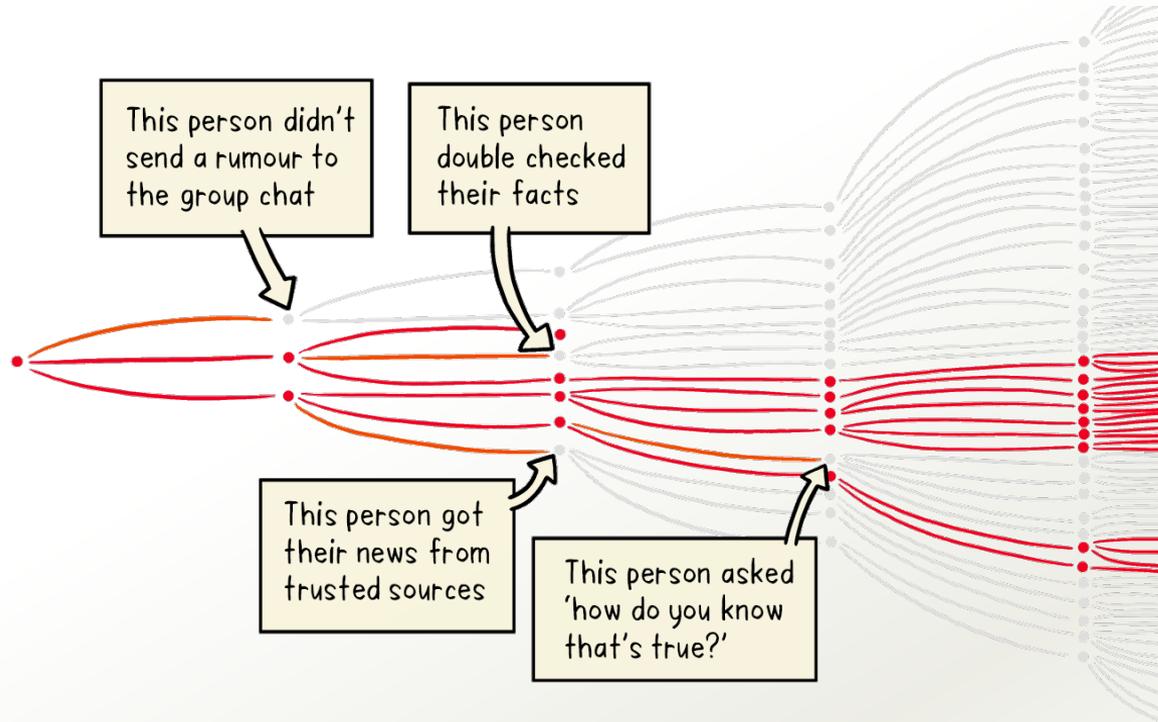

VS.

- Infodemics thrive in the virtual space
- Managing the infodemic has become more challenging with rapid spread of mis- and dis-information through social media
- Managing the infodemic is critical to managing the pandemic

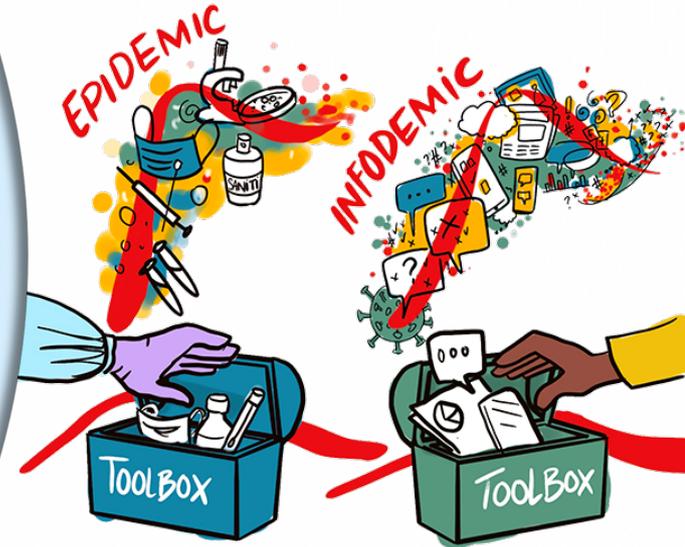

# How people receive, process and act on information varies

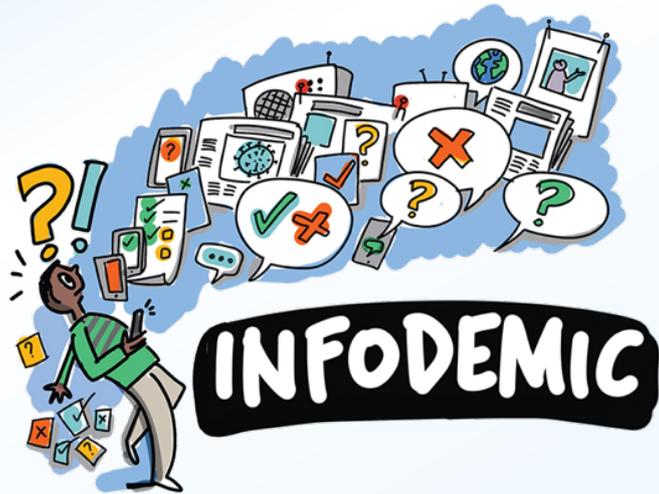

Understanding how information originates, evolves and spreads on different platforms and channels is key to managing the infodemic

# The right information at the right time, in the right format

- While it is not possible to completely eliminate, **it is possible to manage the infodemic**
- Infodemic management aims to ensure people have **access to factual information in a timely manner that is easily understood**; so they may rapidly adopt behaviours to protect health and the health of others during an epidemic
- Infodemic management must :
  - Be backed up by science
  - Rely on evidence-based interventions
  - Make use of best practices, including sharing experiences and continuous learning

# Infodemic management interventions aim to influence health behaviour during epidemics

## Infodemic interventions

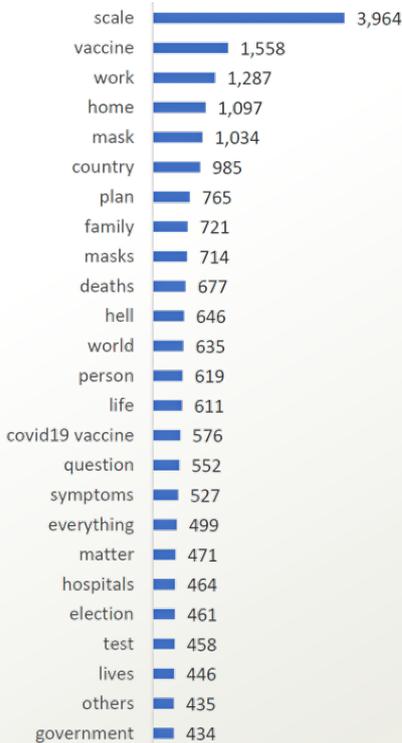

- 1 LISTEN TO CONCERNS
- 2 TRANSLATE SCIENCE & COMMUNICATE RISK
- 3 PROMOTE RESILIENCE TO MISINFORMATION
- 4 ENGAGE & EMPOWER COMMUNITIES

# Quantifying information through social listening

WHO uses a digital listening approach which analyses and quantifies information associated with COVID-19. For example, top keywords and topics are tracked in order to identify trends and help manage the infodemic.

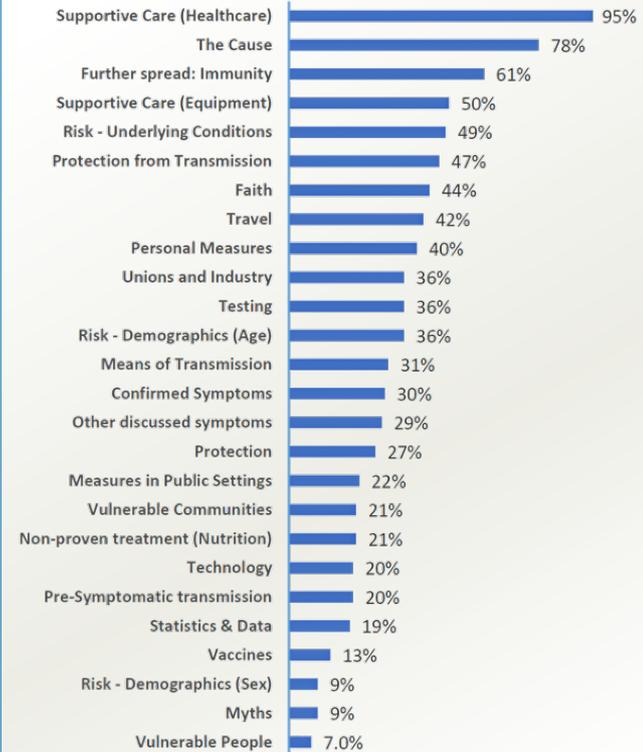

## Questions on COVID-19 (12 – 18 Nov 2020)

Top key words  
(excluding 'COVID-19', 'coronavirus' and 'virus')

## Top rising topics (12 – 18 Nov 2020)

Based on % change of conversation volume from the previous week

# Translating science into protective measures

WHO video guidance on COVID-19

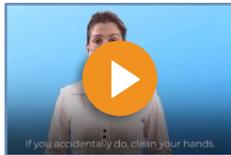

## MASKS

[Medical and fabric masks: who wears what when?](#)

[How to wear a fabric mask safely](#)

[How to wear a fabric mask](#)

[How to wear a medical mask](#)

## TRANSMISSION

[How to break the chains of transmission](#)

**NEW!**  
[Three factors help you make safer choices during COVID-19](#)

## PROTECTING OURSELVES

[How to protect yourself against COVID-19](#)

[Seven steps to prevent the spread of the virus](#)

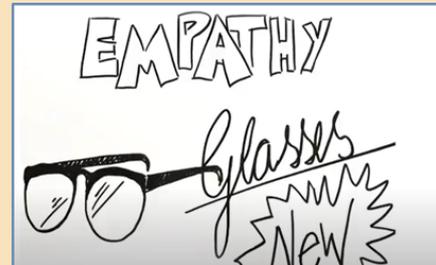

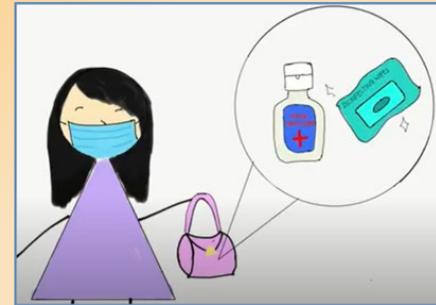

**Being resistant to misinformation** requires an understanding of how information flows, but also understanding of cognition and behaviour

## WHO works with communities to protect health during epidemics

- WHO EPI-WIN has established representative groups from key communities (faith-based, youth, employers and workers) who communicate regularly with WHO and give input on projects and initiatives. Examples:
  - **Co-development** of practical guidance on COVID-19 education, preparedness and response to support faith-based organizations and faith communities
  - **Collaborating** with young people to design creative, engaging and relevant communication around 'reducing transmission of COVID-19'
  - **Facilitating** a virtual dialogue series together with leaders and representatives from the World of Work
- Since the beginning of the pandemic, WHO EPI-WIN has hosted **80 COVID-19 related webinars** with **participants from 149 countries**

Examples of youth entries for  
'Reducing transmission' Design Lab

## Working together to support public health

- Launched in June 2020, the Collective Service is a partnership between the *International Federation of Red Cross and Red Crescent Societies (IFRC)*, the *United Nations Children's Fund (UNICEF)* and the *World Health Organization (WHO)*. The Collective Service leverages active support from the Global Outbreak Alert and Response Network (**GOARN**) and key stakeholders from the public health and humanitarian sectors.

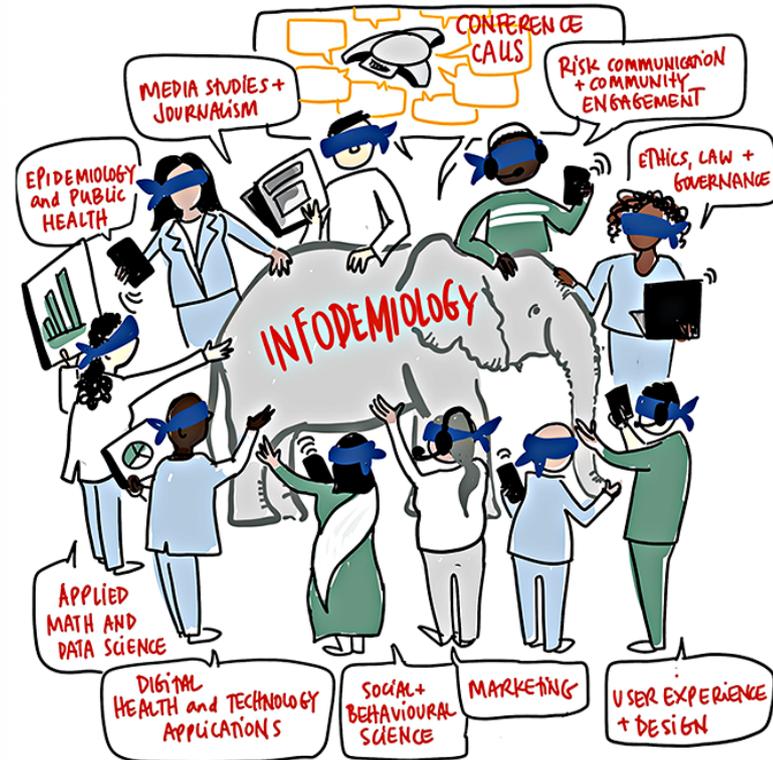

- The **Collective Service** works on **risk communication and community engagement (RCCE)** to ensure consistent, systematic and predictable support to partners involved in public health, humanitarian and development responses to the pandemic

# Infodemiology: the science behind infodemic management

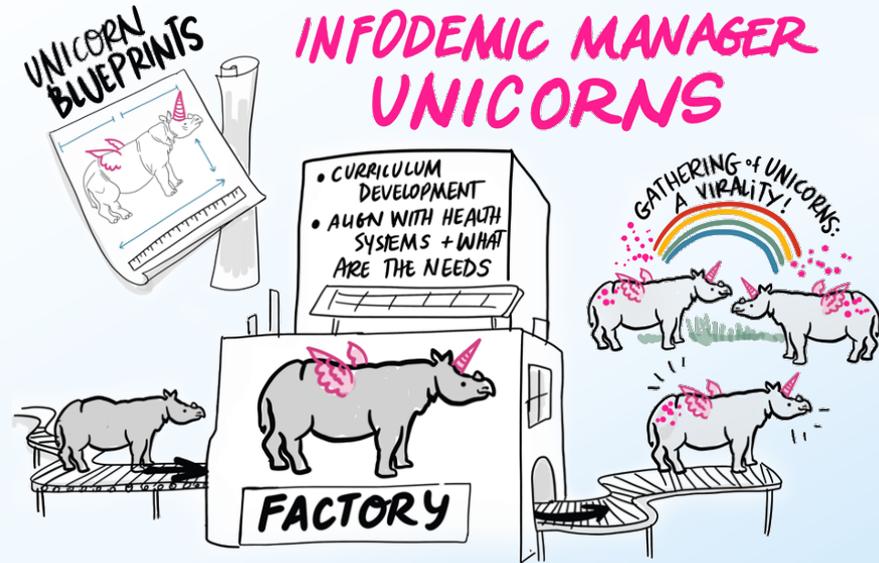

Infodemic management is an evolving area of research and practice

- **How do overwhelming amounts of information** affect behaviour in emergencies and what interventions are effective in addressing it
- **How does online behaviour** affect offline action
- **How does misinformation** affect cognition and influence seeking health services
- **Role of policy interventions** to successfully address and mitigate health misinformation
- **How misinformation** affects unnetworked or closed networks and vulnerable populations

# First global WHO infodemic manager training completed on 26 November 2020

- 278 participants from 75 countries
- Various [lectures by infodemic management specialists](#) on topics such as:
  - [Tools for analysis of the infodemic](#)
  - [Public health and epidemiology in context of infodemic response](#)
  - Risk communication and community engagement

# Resources on infodemic management

# 3. The idea

Nikola Biller-Andorno (IBME) / Sonja Merten (SwissTPH)

### 3. The idea

---

- Over the course of the current pandemic, citizens have been exposed to a range of prevention, containment and control measures, communicated by a diverse spectrum of media outlets.
- Information from different sources has an impact on citizens understanding, emotional responses, moral judgements, and behavioral dispositions.
- Not all communication content is equally reliable, and citizens vary in the information sources they can or choose to access.

### 3. The idea

---

- Providing high-quality information while actively dismantling myths is a key concern for national and global health authorities.
- At the same time: need to obtain an excellent grasp of public perception in order to allow for continuous adaptations and improvement of communication strategies as well as prevention, containment and control measures.
- Failure to communicate can result in irritation, loss of trust, and suboptimal adherence to public health policies.

### 3. The idea

---

- PubliCo is a new tool to provide bi-directional interaction between citizens and policy-makers for risk and crisis communication.
- PubliCo is participatory: Development, deployment and validation cycles are carried forward by an interdisciplinary research team, an expert committee and citizen scientists.
- PubliCo is open and transparent by design, strict data protection.
- PubliCo relies on both quantitative and qualitative data to provide a precise, timely and rich analysis of complex phenomena.

### 3. The idea

---

- PubliCo is flexible and allows the inclusion of qualitative data
- PubliCo offers a space to write a diary on everyday experiences during a crisis (anonymous)
- PubliCo diary narratives can add a perspective of people's concerns in real life
- Diary entries may highlight additional concerns, which can then trigger new analyses in PubliCo

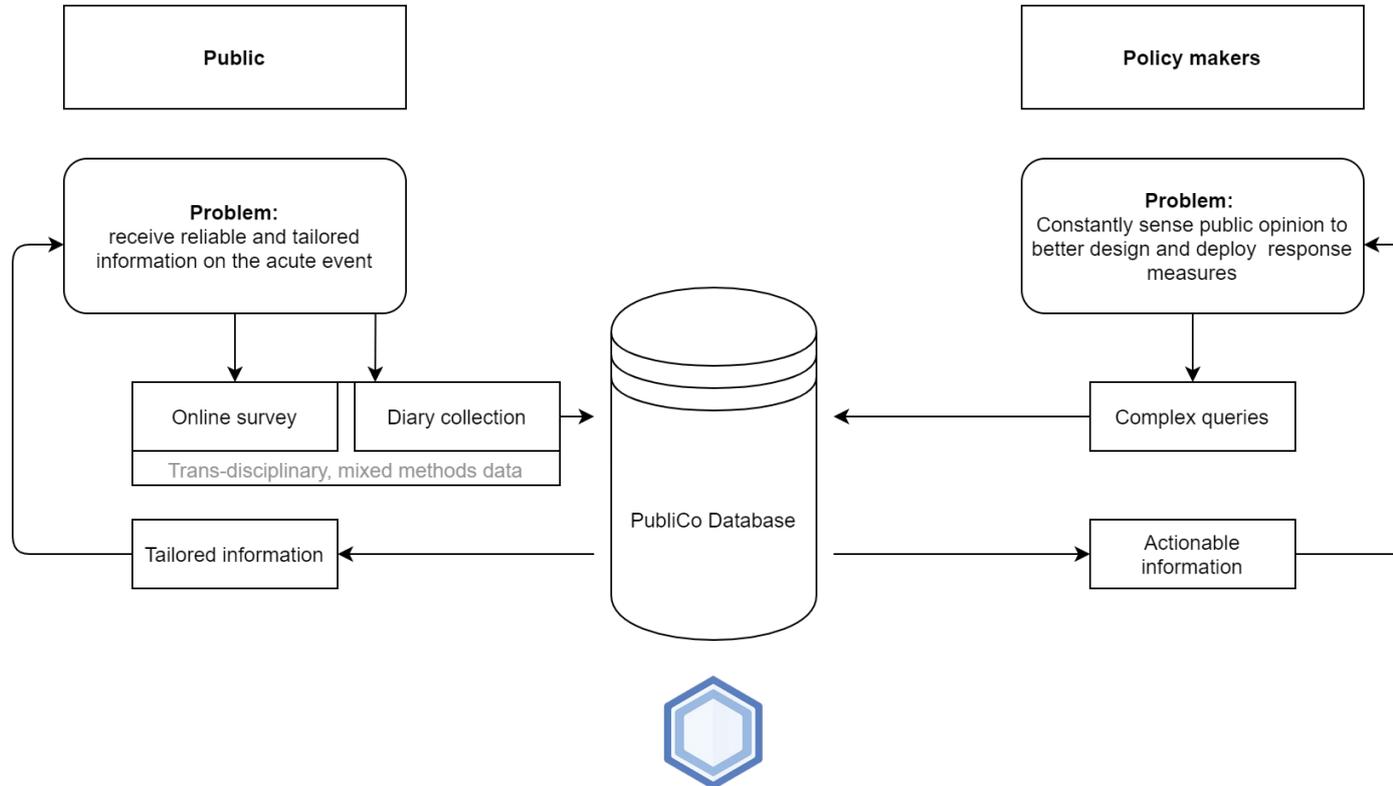

# 4. Strategy

# 4. Strategy

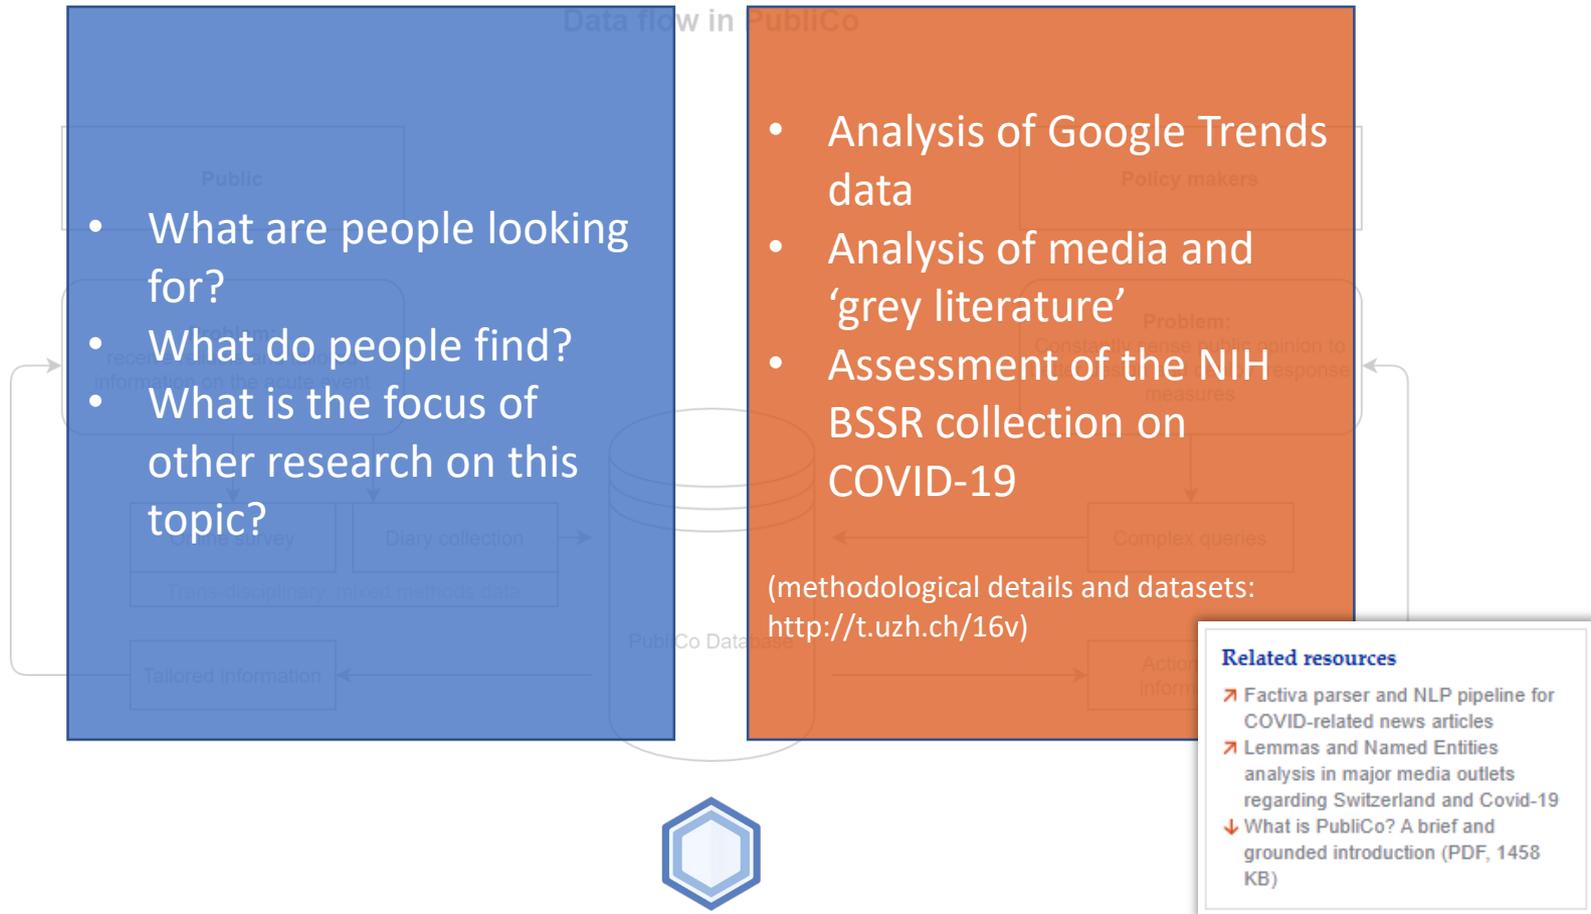

Data flow in PubliCo

# 4. Strategy

Data flow in PubliCo

# 5. Structure

Giulio Michelon (Belka)

# 6. Citizen Science

Rosy Mondardini (Citizen Science Centre Zurich)

# 7. WHO White paper

Kristen Jafflin (SwissTPH)

## 5. WHO White paper

---

Developing and sharing our experience and recommendations:

- Getting feedback
- Examining preliminary results
- Refining and revising the PubliCo platform
- Reporting on the process and recommendations in a WHO White Paper

## 5. WHO White paper

---

Feedback from:

- International advisory board with diverse array of experts
  - Expertise in bioethics, public health, risk and crisis communication, medicine, social sciences
  - Experts with experience in a wide range of different settings
- Citizen scientists

## 5. WHO White paper

---

### Preliminary results

- From diaries
- From online web survey
- From Google trends and media analyses

## 5. WHO White paper

---

Refining and revising PubliCo platform based on:

- Feedback from experts
- Feedback from citizen scientists
- Preliminary results

## 5. WHO White paper

---

White paper will include:

- Overview of PubliCo concept
- Summary of platform development so far
- Description of testing and validation process
- Recommendations for others who wish to develop platforms like PubliCo

# 8. Future

Nikola Biller-Andorno (IBME) / Sonja Merten (SwissTPH)

## 8. Future

---

Develop a framework/standards for good risk and crisis communication

- Targeted information vs. creating «information bubbles»
- Any role for censorship (e.g. anonymized diary entries presenting conspiracy theories)?
- Information vs. nudging/implicit blaming & shaming

## 8. Future

---

Potential future modules:

- Risk perception (infection, mortality etc.)
- Allocation issues: who should get access to vaccine, ICU, other goods (nationally, possibly also exploring national interest vs. global solidarity)
- Trade-offs freedom vs. safety
- Media consumption (e.g. movies on pandemics, computer games) and cognitive/emotional/behavioral responses

## 8. Future

---

Going global? The transferability of the PubliCo approach to other settings

- Technological preconditions (mobile phones, electricity)
- Cultural: public trust that citizens' voices are taken seriously
- Political: Potential abuse in non-democratic societies (surveillance, identification of citizens with «deviant» opinions)

## 8. Future

---

Adding a local perspective also in low-income contexts

- High relevance of obtaining views from all pockets of the population in order to develop or adapt public health measures
- PubliCo is inclusive – can engage persons from poorer strata and vulnerable population groups who may otherwise be excluded of a public dialogue
- Adaptation of the qualitative diary component to include voices from e.g. community health workers to provide a community perspective

# 9. Demo

Samuel Giacomelli (Belka)
